READY. SET. SAVE.

BRAVELLE® (urofollitropin for injection, purified) and MENOPUR® (menotropins for injection) are prescription medicines that contain hormones. BRAVELLE and MENOPUR contain follicle stimulating hormone and luteinizing hormone activity. These hormones stimulate healthy ovaries to make eggs. BRAVELLE and MENOPUR are used for women who need medical help to get pregnant. Your doctor may prescribe more than one medicine as part of a pregnancy plan.

## Important Safety Information

Do not use BRAVELLE or MENOPUR if you: have ovaries that are not able to make eggs even with the use of hormones, are pregnant or think you may be pregnant, have problems with your thyroid gland or adrenal gland that are not controlled by taking medicine, have tumors in your female organs (including breasts), have a tumor of your pituitary gland or any other tumor in your brain, or have heavy or irregular vaginal bleeding and the cause is not known. Do not use BRAVELLE or MENOPUR if you have a known previous allergic reaction to these medications.

BRAVELLE and MENOPUR may cause serious side effects. They sometimes stimulate the ovaries too much. This is called ovarian hyperstimulation syndrome (OHSS) and can be a serious medical problem. OHSS may cause pelvic pain or breathing problems, or it may make you urinate less. In rare cases, patients with this problem have had serious lung problems. BRAVELLE and MENOPUR can also cause blood clots and strokes. Call your doctor or get medical help right away if you have: severe pelvic pain, nausea, vomiting, diarrhea, sudden weight gain, trouble breathing, or decreased or no urination. BRAVELLE and MENOPUR may cause pregnancies with twins or more than two babies at the same time, miscarriages, birth defects, and pregnancies located outside the uterus. Do not use BRAVELLE or MENOPUR if you are nursing. The most common side effects with BRAVELLE are stomach cramps, headache, bloating, hot flashes, and breathing problems. The most common side effects with MENOPUR are headache, stomach pain, and upset stomach. Sometimes there is an injection-site reaction that can cause bruising, pain, or redness.

ENDOMETRIN® (progesterone) is a vaginal insert that contains the hormone progesterone, one of the hormones essential for helping you to become and to stay pregnant. ENDOMETRIN is for women who need extra progesterone while undergoing treatment in an Assisted Reproductive Technology (ART) program.

## Important Safety Information

Do not use ENDOMETRIN if you:

- Are allergic to anything in ENDOMETRIN
- Have unusual vaginal bleeding that has not been evaluated by a doctor
- Currently have or have had liver problems
- Have or have had blood clots in the legs, lung, eyes, or elsewhere in your body

Progesterone can increase your chance of getting blood clots. Blood clots can be serious and lead to death. Serious blood clots include those in the legs, lungs, eyes, heart, and brain.

Call your doctor and get medical help right away if you have: persistent lower leg pain, sudden shortness of breath, coughing up blood, sudden blindness (partial or complete), severe chest pain, sudden severe headache, vomiting, dizziness, or fainting, weakness in an arm or leg, or trouble speaking, yellowing of the skin and/or white of the eyes indicating possible liver problems.

Common side effects seen with ART and ENDOMETRIN included pelvic pain after surgery, abdominal pain, nausea, and swollen ovaries (ovarian hyperstimulation syndrome).

## QUESTIONS ON REBATE STATUS? E-mail [customerservice@IVFGreenlight.com](mailto:customerservice@IVFGreenlight.com) or call 1-888-212-8508

Please remember that it may take up to 30 days before you receive your rebate check.

NOVAREL® (chorionic gonadotropin for injection, USP) is a prescription medicine that contains a hormone to help stimulate healthy ovaries to make eggs. NOVAREL is used for women who need medical help to get pregnant. Your doctor may prescribe more than one medicine as part of a pregnancy plan.

### **Important Safety Information**

Do not use NOVAREL if you have begun puberty at an unusually early age, have prostate cancer, or have had a prior allergic reaction to this hormone. This hormone may cause harm to an unborn baby when given to a pregnant woman.

NOVAREL may cause serious side effects. It sometimes stimulates the ovaries too much. This is called ovarian hyperstimulation syndrome (OHSS) and can be a serious medical problem. OHSS may cause pelvic pain or breathing problems, or it may make you urinate less. In rare cases, patients with this problem have had serious lung problems. NOVAREL can also cause blood clots and strokes. Call your doctor or get medical help right away if you have: severe pelvic pain, nausea, vomiting, diarrhea, sudden weight gain, trouble breathing, or decreased or no urination. NOVAREL may cause you to be pregnant with twins or more than two babies at the same time.

Other side effects of NOVAREL include headache, irritability, restlessness, depression, fatigue, swelling, and pain at the site of injection.

Anaphylaxis has been reported with urinary-derived hCG products.

**Please see Important Safety Information throughout and click for full Prescribing Information for [BRAVELLE](#), [MENOPUR](#), [ENDOMETRIN](#), and [NOVAREL](#).**

**You are encouraged to report negative side effects of prescription drugs to the FDA.  
Visit [www.fda.gov/medwatch](http://www.fda.gov/medwatch) or call 1-800-FDA-1088.**
